<https://addons.prestashop.com/en/blog-forum-new/8069-news-advanced-google-rich-snippets.html>

Discover «Site Cache + Dynamic Hooks»

Site Cache for Prestashop - is the best solution for Prestashop store that significantly speeds up page load time, reduces the load on the server, improves website ranking and remarkably increases sales conversion.

<https://addons.prestashop.com/en/website-performance/17537-site-cache-dynamic-hooks.html>

Installation:

1. Enable Force compile.

Prestashop 1.7.x.x

Log into Prestashop Admin Panel and go to Back Office > Advanced Parameters > Performance and set Template compilation: Force compilation. and set Cache: No

Prestashop 1.6.x.x

Log into Prestashop Admin Panel and go to Back Office > Advanced Parameters > Performance and set Template compilation: Force compilation.

Prestashop 1.5.x.x

Log into Prestashop Admin Panel and go to Back Office > Advanced Parameters > Performance and set Template Cache: Force compile and set Cache: Disable

Prestashop 1.4.x.x

Log into Prestashop Admin Panel and go to Back Office > Preferences > Performance and enable the Force compile. (Force compile - this forces Smarty to (re)compile templates on every invocation. This is handy for development and debugging. It should never be used in a production environment.)

Prestashop 1.3.x.x

To clear cache /tools/smarty/cache/ and /tools/smarty/compile/ delete files in these folders.

2.1 Upload files through FTP

Upload all files and folders from folder /modules/ using an FTP client.

2.1 Upload module through admin panel

Log into Prestashop Admin Panel and go to Back Office > Modules -> click on the

Prestashop 1.7.x.x : UPLOAD A MODULE

Prestashop 1.6.x.x; Prestashop 1.5.x.x: Add a new module

Prestashop 1.4.x.x; Prestashop 1.3.x.x: Add a module from my computer

Select .zip file and upload module

3. Install module.

Log into Prestashop Admin Panel and go to Back Office > Modules > **SEO** Modules and install **Product, Shop Reviews, Reminder, Profile, Rich Snippets** module.

4. Configure Rich Pins

To validate your shop, please follow these steps:

- Create an account or login to pinterest on <http://www.pinterest.com>
- Open another tab in your browser and go to <https://developers.pinterest.com/tools/url-debugger/>
- Insert the url of one of your shop products in the text field and press "Validate" button
- Once your url has been processed you will see a page similar to the screenshot below with the data of your rich pin, now press on the "Apply now" button just below "Validate"

Validate your rich pins and apply to get them on Pinterest:

1. Make sure you've read the [rich pin documentation](#).
2. Validate your rich pins below by entering a URL below. This could be a page with metatags ([preview](#)), an oEmbed endpoint ([preview](#)) or a Shopify link ([preview](#)).
3. Preview your pins to make sure they're correct.
4. Once your rich pins are validated, apply to get them approved.

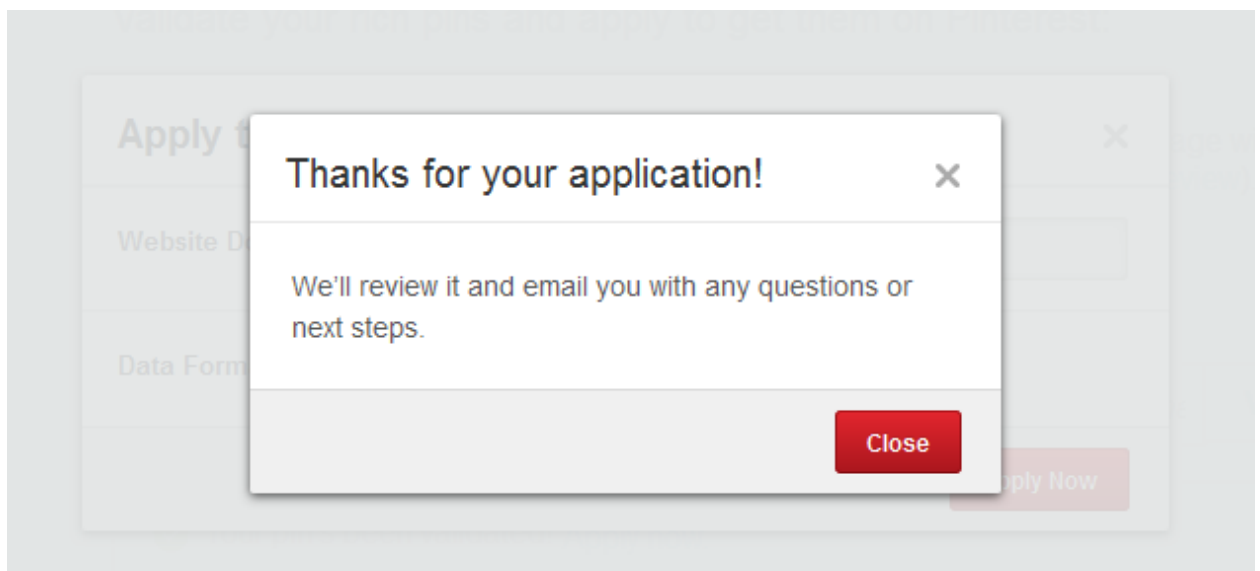

http://demo-mitrocops.com/demosite/gsnipreview/en/music-ipods/1-ipod-nε	Validate
 Your pin's been validated! Apply now.	

- Now you will be prompted to insert the domain where the rich pins will be validated and the data format for the rich pins.

The domain and the data format should be precompiled, just check if the domain is correct and that data format is "HTML Tags" and then click "Apply now"

A screenshot of a web browser showing a dialog box titled "Apply to enable your rich pins" with a close button (X) in the top right corner. The dialog box has a light gray background and a white border. It contains a "Website Domain" label and a text input field with the value "demo-mitrocops.com". Below this is a "Data Format" section with three radio button options: "HTML Tags" (which is selected), "oEmbed", and "Shopify". At the bottom right of the dialog box is a red button labeled "Apply Now". The background of the browser shows a blurred view of a page with some text and a green checkmark icon.

- The process is complete, now it's only a matter of time to get your site enabled for rich pins.

Remember that you need to validate only 1 pin to enable rich pins on your whole domain.

All your old pins will be converted automatically to rich pins when the first pin is verified.

Deactivation:

1. Uninstall module.

Log into Prestashop Admin Panel and go to Back Office > Modules > **SEO** Modules and uninstall **Product, Shop Reviews, Reminder, Profile, Rich Snippets** module.

2. Clear cache.

Prestashop 1.7.x.x

Log into Prestashop Admin Panel and go to Back Office > Advanced Parameters > Performance and set Template compilation: Force compilation. and set Cache: No

Prestashop 1.6.x.x

Log into Prestashop Admin Panel and go to Back Office > Advanced Parameters > Performance and set Template compilation: Force compilation.

Prestashop 1.5.x.x

Log into Prestashop Admin Panel and go to Back Office > Advanced Parameters > Performance and set Template Cache: Force compile and set Cache: Disable

Prestashop 1.4.x.x

Log into Prestashop Admin Panel and go to Back Office > Preferences > Performance and enable the Force compile. (Force compile - this forces Smarty to (re)compile templates on every invocation. This is handy for development and debugging. It should never be used in a production environment.)

Prestashop 1.3.x.x

To clear cache /tools/smarty/cache/ and /tools/smarty/compile/ delete files in these folders.
